

## THE GROWN-UP ZONE **FALL 1991**

Dear Grown-Ups.

We're back and we're glad. We're sorry we missed an issue. Putting out a magazine is tough. We're still a start-up and we can't guarantee that we won't miss another issue. We love reporting, writing and publishing this magazine and we're working hard to create projects and programs that will enable us to deliver P3 Magazine to you when you expect it. And if you check "Hello Earthlings" you'll see we've told your kids the same thing.

Things haven't been all bad. Throughout this difficult time your support has been tremendous. We received hundreds of letters from children, parents and teachers telling us how much they love the magazine. We now have 20,000 readers nationwide and we're growing daily. PS won a Renew America Special Merit Award for Environmental Leadership and was featured in People Magazine.

This issue of P3 is a direct response to letters we've been getting since January. The Persian Gulf War scared us all. Many of us had relatives and friends who were sent into combat and all of us were confronted with the frightening flaws in a national energy policy that relies on fossil fuels. The letters on the cover reflect the deep concern children feel about the environmental impact of this war.

The cover story answers the questions children have been asking us about the oil dump in the Gulf and the oil fires that continue to rage out of control. Action-Packed America profiles Lynne Frink, an oil spill animal rescue specialist who spent 3 weeks in the Middle East teaching a crash course in oil spill bird rescue techniques.

Meanwhile, in Planet 3's oceans, sea turtles are struggling to survive. The oldest living vertebrates are in deep trouble from poaching, pollution and shrimpers. Other Earthlings gives kids a sobering report on the state of sea turtles. As always, PS gives them ways to help. Special thanks to Todd Steiner and Sara Meghrouni at the Sea Turtle Restoration Project for their help on this story.

We're introducing two new features in this issue. P3 Hot Line is a page of news flashes and updates on stories we've previously reported. The Kid Advisor Squad page is devoted to reviews and ratings of eco-products for kids by kids who read P3.

And on page 15 you'll find the first annual PS/Disney Eco-Kid Survey. We've teamed up with Disney Adventures Magazine to reach over 400,000 children and ask them how they feel about Earth. Look for the results in the Winter issue. It may be out in May, but we're shooting for January.

MILLIONS OF OTHER EARTHLINGS SUFFER. PLANET 3 WAS HIT HARD IN THE PERSIAN GULF WAR.

THE DAMAGE COMES FROM SPILLED AND BURNING OIL.

Olliseaked sand shows same of the damage from the killer oil dama.

The Persian Gulf shimmers in the desert heat. For about 300 miles around the oil port of Mina al-Ahmadi, beaches are glazed with a thick coat of oil. There's nothing alive in sight.

"It's a ghastly change in habitat," toxic spill expert Jackie Michelle told P3.

No one knows how many thousands of birds died. Fifty dugongs, gentle sea cows that graze on underwater plants, were killed. One dead sea turtle washed ashore. It's clear to anyone who's been there that the dump zone is a dead zone.

Last January's oil dump meant about 10 million gallons of oil — surged into the warm salty water of the Persian Gulf.

Nobody was ready to clean it up. Sea birds that dove for fish under the slick were coated with oil and drowned. Beds of seagrass were clogged with oil and destroyed. "The only good news is that the spill stayed in one part of the Gulf," said Jackie. "Nature played the biggest role in spill control." Winds kept the slick from moving too far too fast. Some oil was skimmed off the water by oil company crews. A lot more oil evaporated under the hot sun. The rest washed up on beaches in dark greasy waves or mixed with sand and sank to the bottom where it formed tar mats.

Jackie Michelle thinks the worst hit parts of the Gulf will take until the next century to make a comeback. The rest of the Persian Gulf is pretty much as it was before the oil dump — not very clean. To some of the people living there, what travels on the Gulf is more important than what lives in the Gulf.

Oil rich countries like Kuwait and Saudi Arabia use the Persian Gulf as the place to pipe their oil into huge tanker ships that fill up on the fossil fuel used in America, England, France, Japan, Germany and other countries. Spills happen all the time. And oil dumping is not new to the Gulf. Oil dumps happened during the war between Iran and Iraq that ended just before the shooting began in the Persian Gulf War.

## FOSSIL FUEL INFERNO

By burning oil that other countries wanted to buy, Iraqi soldiers lit the biggest blaze ever. Over 600 oil wells were torched last January. As you read this in the fall of 1991, oil fires are still burning in Kuwait.

They rage in a former war zone where live landmines are still buried just under the sand. That makes a tough job even more dangerous. According to a report from Greenpeace, it's going to take between 2 and 10 years of firefighting every day before the last fire is out.

Streams of fire pour out of the mouth of ex-oil wells. Toxic smoke billows into an already inky sky. Black ash covers the sand for miles. White steam hisses out of cracks in the ground made by the intense heat. Huge lakes of oil have formed on the sand and some of them are on fire, too.

U.S. Marines who came out of the burn-

ing oil fields took three days to scrub clean.
They called the burn zone spooky and had
to use flashlights at noon.

There's about 44 years worth of oil left under the sand in the Middle East. Millions of gallons of oil are going up in smoke everyday. And when fossil fuel burns — in cars, furnaces, rockets or oil well fires — pollution follows.

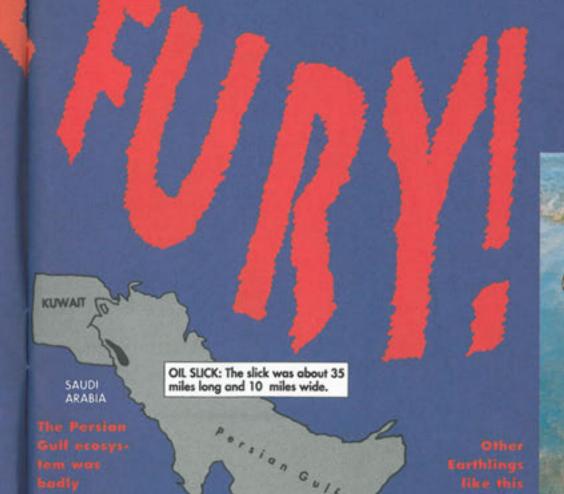

Some chemicals in the smoke mix with water and fall as acid rain. Cows and camels near the fires are getting sick and dying. Doctors see more people every day with breathing trouble.

Friends of the Earth is an environmental group that sent a team to see the oil fires last June. The team reported that the fires are an international eco-nightmare. Friends of the Earth thinks every country that helped fight the war should help put out the fires.

ting oil off animal fur and bird feathers. Since oil is sticky and can't be washed away, people tried all kinds of things. They even rolled animals in corn meal and kitty litter! A lot of the ways the animals were cleaned hurt them even more. Many died. Lynne formed a company called the TriState Bird Rescue and Research Center to find better ways to help killer spill victims.

Today, TriState trains the Coast Guard and people from the governments of the USA and Canada to rescue oil-soaked birds and animals and help them heal. It was no surprise when the United Nations called Lynne and asked her to bring a team to the Middle East.

#### **SMOKE GETS IN YOUR EYES**

When she arrived in Bahrain, Lynne saw just how bad things were for the birds that lived and fished around the Persian Gulf. Birds stood on the beaches unable to fly. Oil dripped from their wings. The smoke clouds from oil well fires 200 miles away filled the air with ash and stinging haze. On the worst days, Lynne's eyes teared and her throat hurt after only a few minutes outside.

People from all over the world had come to help clean the oilsoaked animals, but everyone had a different idea how to do it best.

#### HANDLE WITH CARE

. . . . . . . . . . . . . . . .

For the first six days, Lynne and her team met with veterinarians, government workers and health officials. Their job was to teach a crash course on handling the victims of the killer oil dump.

"Remember," Lynne said,"These birds and animals are wild. They've never been picked up by a human being. They're brought into a building and they've never seen a wall or a cage or a ceiling before.

Oil soaked birds and animals don't know that people are trying to help them. "They think people want to eat them," Lynne said. "You have to have a lot of practice handling them and knowing how to make them comfortable enough so they can heal."

Some ways to help the scared and hurt birds and animals are to put branches, leaves and flowers in their cages and to leave them alone as much as possible.

Eating is an important part of healing. Wild animals who catch their food in the water might not recognize a fish on a plate as food. For some birds, fish are put into a glass pie plate filled with water. Goldfish are tossed in so the bird sees motion and goes for the food.

After three weeks of teaching rescue methods, Lynne came home. "The war is over," Lynne said. "But there are still people and animals suffering from that pollution. They're doing their best, but the oil is still in the water."

## BE A FOSSIL FUEL FOE

Lynne wants to teach people ways to prevent oil spills from happening in the first place. She'll be back in Bahrain next year to help do just that. She thinks kids can help by thinking about the future, too.

"We get the animals after they're injured," she said. "The real solution to this problem is to prevent these animals from getting hurt in the first place. The best way to do that is to use less oil."

Lynne knows that simple actions like walking instead of riding in a car aren't as exciting as rescuing an animal from a pool of oil, but it's more effective because less oil means less chance for oil spills.

"Pollution is all our faults," she says. "We can all help."

If you like what Lynne is doing, let her know! Here's her address: Lynne Frink, TriState Bird Rescue and Research, Inc., 110 Possum Hollow Road, Newark, Delaware 19711.

# ECO-RIFICZECOS STEMS

Ecosystem is ScienceSpeak for a place that is a total life support system. Plants and animals exist side and by side and help each other stay alive. It's simple: ScienceSpeak

Plants make O. Animals need O.

Animals make CO. Plants need CO.

Animals eat plants. Animals eat other animals.

Animals help plants by spreading seeds around.

Ecosystems are everywhere. A pond is an ecosystem. The Persian Gulf is an ecosystem. The desert is an ecosystem. The Arctic National Wildlife Refuge is an ecosystem. Your backyard is an ecosystem. Planet 3 is one big orbiting ecosystem. & Pollution can turn an ecosystem into an Eco-Nightmare. The ecosystem of the Persian Gulf has been badly damaged by the war. The Arctic ecosystem could be badly damaged if people drill for oil. Your backyard ecosystem could be hurt by dumping old

motor oil or paint in the grass or spraying toxic bug and weed killer on your plants. One way to keep many of Earth's ecosystems safe is to break the fossil fuel habit.

oxygen,

Earthlings' favorite

carbon dioxide,

Earth plants' favorite

breathing gas

ast winter President Bush announced his ideas for future energy in his National Energy Strategy. Here are some of them:

- open over one million miles in the Arctic for oil drilling
- make it easier to mine the fossil fuels left in the other

As an Earthling, President George Bush knows America uses more fossil fuel than any other country. He knows the USA buys most of its oil from Kuwait and Saudi Arabia. He knows the only place left in this country that might have a lot of fossil fuel is the Arctic wilderness. The President also knows that burning fossil fuels means more acid rain and global climate changes on everyone's favorite home planet.

We tried to talk to President Bush but P3's calls to the White

e said he wants to

be the environmental

fuel fan.

president. But President

Bush's energy plan shows that he's a fossil

House were not returned.

Be an ecosystem maniac! Start here!

Write to President Bush. Tell him what you think of his fossil fuel plan. Tell him your ideas for clean power sources like solar and wind that will never run out as long as the sun shines. Here's his home address 1600 Pennsylvania Avenue, Washington DC 20501

Tell your friends about President Bush's fossil fuel plan. Ask the teacher if everyone can write President Bush a

letter with the class's ideas for breaking America's fossil fuel hobit, You'll find his home address in tip #1.

PRESIDENT BUCH

**President Bush wants Congress** to let oil companies dia and drill in the Arctic National Wildlife Refuge. This would turn the Arctic ecosystem into an Eco-Nightmare. Only the Senate can decide whether to save the Arctic or let drilling begin. Write to your Senator. Tell him or her to support S. 344 - Senate code for a bill that would protect the Arctic Refuge so you and your kids can visit a real wilderness: Here's where to write: YOUR SENA-TOR, US Senate, Washington DC 20510. Your parents, teacher or librarian can help you find out who your Senator is.

Visit your closest ecosystem. It can be your backyard, a park or the woods. Take a notebook and write down or draw at least five kinds of life you see there. Bugs count. Write down what you see. Remember to leave the ecosystem the way you found it.

continued here

Today people treat turtles with less respect. We kill them for their meat. We use their shells to make glasses, combs and cigarette lighters. We turn their skin into purses and shoes. We steal their eggs and sell them.

People also pollute the ocean. We throw plastic bags and balloons into the water. Sea turtles eat them and die.

Some sea turtles get caught in shrimp nets and drown. Shrimpers are supposed to use Turtle Excluder Devices that let shrimp into the nets and keep turtles out. But many shrimpers don't use them.

Donna Bernardi works for the Sea Turtle Restoration Project at the Earth Island Institute. She and other members of the turtle team travel all over the world to protect the turtles — especially during nesting season in summer and fall.

There are only a few beaches on Earth where sea turtles lay their eggs. These beaches are in Florida, Mexico and the Caribbean—places people like to vacation. Hotels and condos are destroying the turtles' nesting areas.

Male sea turtles spend all their lives at sea. Females come ashore only to lay their eggs. They spend hours crawling slowly up the beach, digging a hole and laying about 100 eggs. Then they crawl back to the waves and slip into their ocean home.

The eggs hatch in 45 to 60 days. The babies are almost always born at night. They dig out of the sand and head toward the brightest light they can see. That used to be the moon shining on the water.

These days, hotel lights and car headlights attract them. They crawl the wrong way and are crushed or dry out and die.

There is some good news. Donna and the other members of the Sea Turtle Restoration Project are doing all they can. They helped stop the slaughter in Mexico.

"Last year in Mexico, 75,000 turtles were killed and sold," says Donna. "It was the largest killing

of an endangered species."
This year 50,000 Olive Ridley turtles nested on one beach.

### SEA TURTLES AT A GLANCE

TURTLETYPES: There are 7 species of sea turtles: Leatherback, Green, Flatback, Hawksbill, Loggerhead, Olive Ridley and Kemp's Ridley

AVERAGE WEIGHT: From 75 pounds to 2,000 pounds.

AVERAGE AGE: Sea turtles live longer than any other animals.

Some can live to be over 100 years old.

AVERAGE SWIMMING SPEED: 35 miles an hour

FAVORITE FOODS: Jellyfish, sponges, turtle grass and shellfish

MESTING FACT: Olive Ridley turtles nest at one time on one Mexican beach.

As many as 50,000 crawl up the sand of Escobilla Beach to lay their eggs.

## P3's Easy-to-Read R E C Y C L A B L E Do-It-Yourself Save the Sea Turtles Kit

Sea turtles everywhere are in big trouble. Pollution, poaching and shrimping have placed these ancient Earthlings in danger. If you want a home planet with sea turtles when you grow up, act now. Here are a few things you can do:

- Japan is the #1 consumer of sea turtle products. Right now they're buying the shells of hawksbill turtles to make cigarette lighters, combs and glasses. The U.S. can ban sea turtle products and punish countries like Japan that use them. You can write to President Bush. Tell him your ideas for helping sea turtles. Here's his home address: 1600 Pennsylvania Avenue, Washington, D.C. 20501.
- American shrimp boats are required to use Turtle Excluder Devices (TEDs). Foreign boats are not. Many sea turtles are caught in shrimp nets and drown. The Teenage Mutant Ninja Turtles are helping sea turtles by taking a stand against boat crews that don't use Turtle Excluder Devices. You can help the Ninjas by writing to the David Colson at the Department of State. Tell him to be sure that US boats and foreign boats are using TEDs. Here's his address: Department of State, Washington, DC 20520
- Patagonia Outdoor Wear supports sea turtles. They give a percentage of profits to the Sea Turtle Restoration Project to help them help turtles everywhere. For more information on the Sea Turtle T-shirt, call 1-800-336-9090.

Don't buy products made from sea turtles.

Ask your parents not to either.

Hello Earthlings! P3 MAGAZINE and DISNEY ADVENTURES want to know how you feel about everyone's favorite home planet — Earth. Answer the questions below, clip out this page and send it to us in an SASE (that's code for Self-Addressed, Stamped Envelope.) The first 10,000 Eco-Kids to respond will receive an official recyclable button. The first 25 kids will also receive a free subscription to Disney Adventures. The 25 top Bonus Eco-Rap writers will win a free subscription to P3 and a P3 Green Kids Page-a-Day calendar. Look for the results in P3#9 and the February issue of Disney Adventures.

#### How to make a SASE (Self-Addressed Stamped Envelope)

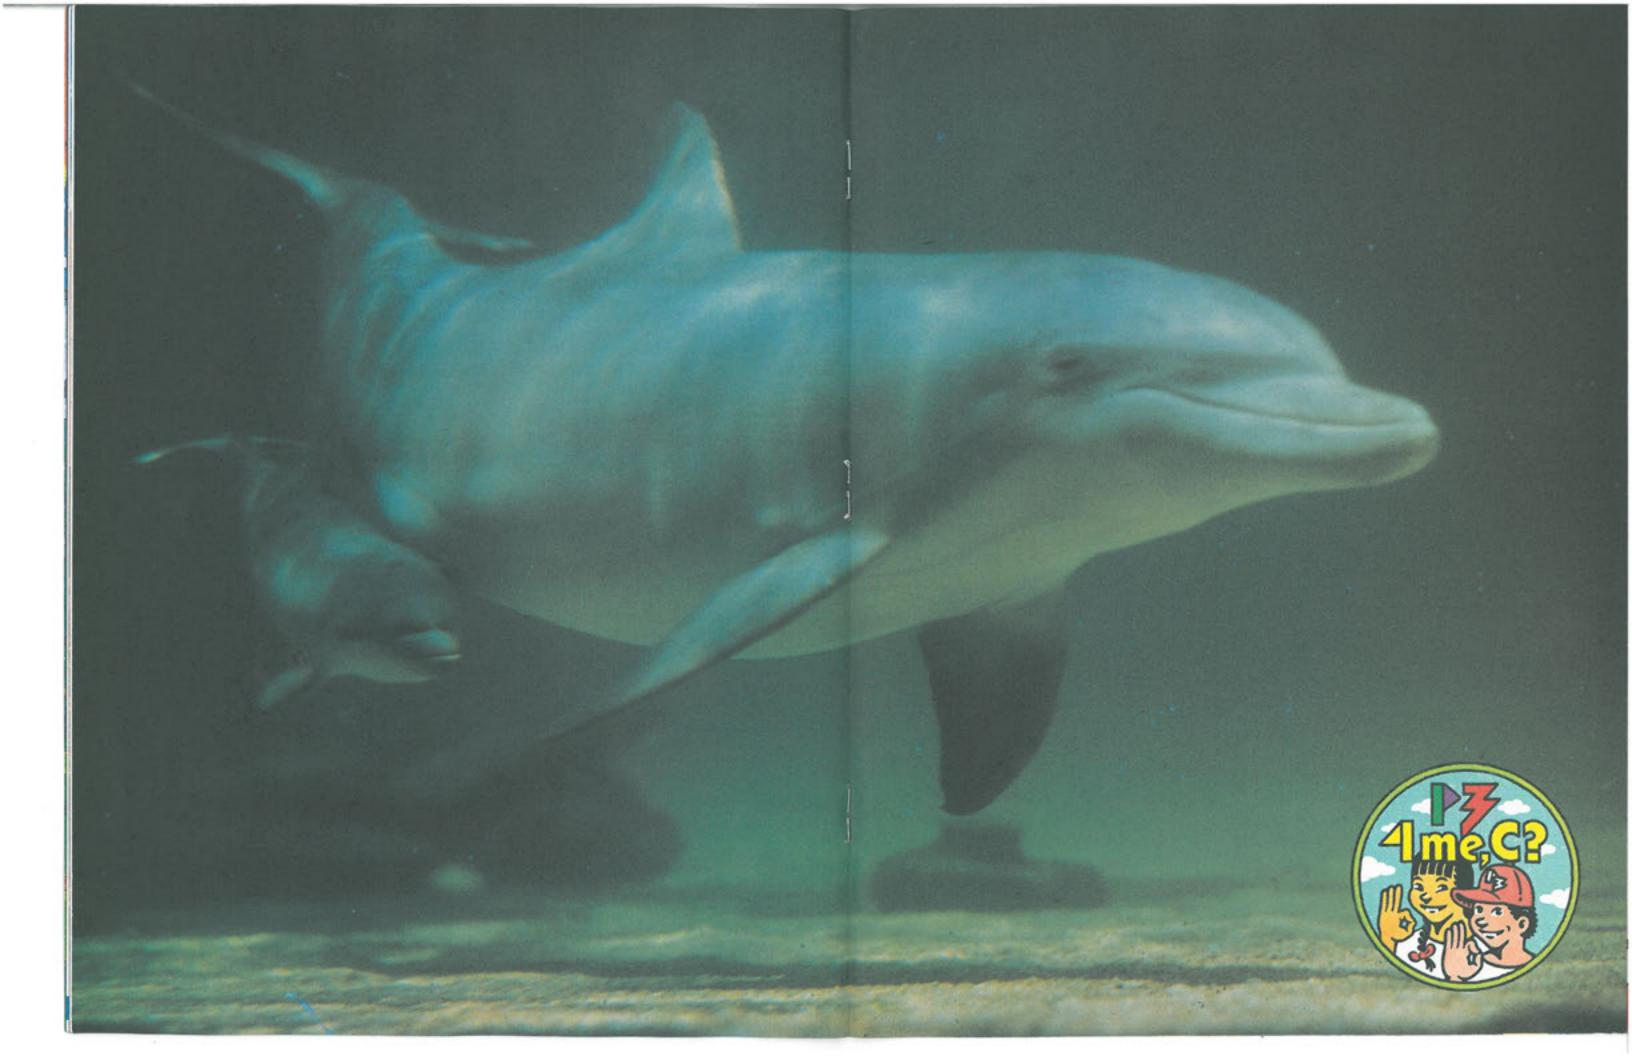

#### What You Need

2 envelopes, 2 294 stamps, a pen.

- Write a big 1 on the back of one envelope and a big 2 on the back of the other.
- Lick both 994 stamps. Stick one in the upper right hand corner of each envelope.
- Write your name and address in the middle of blank envelope number 9.
- Write our name and address in the middle of blank envelope number 1 and your return address in the upper left hand comer.
- Fold envelope number 2 and put it in envelope number 1. Fold this survey and put in there, too.
- Seal envelope number 1 and mail it.

EARTH

ALISON LUNGSTRUM and MRS. TULEY, her 3rd grade teacher, formed an eco-club at their school in Hillcrest, Kansas. They call themselves Youth In Action (YIA). YIA started a recycling program and put recycling bins all over the school. YIA member compost leftover cafeteria food and raised money to help save a nearby wetland called Cheyenne Bottoms. Alison says, "I would like to see landfills not filled so high with garbage, animals everywhere saved and no more pollution!"

Rad sam

enter

SIXTH GRADERS at the Turn of River School made a pizza that even the Ninja Turtles couldn't eat. They used 100% garbage in a recycling exercise from Keep America Beautiful's Waste in Place program! Scrap paper and old plastic took the place of pepperoni and sausage. Every slice showed just how much garbage people make when we don't reuse, recycle and compost.

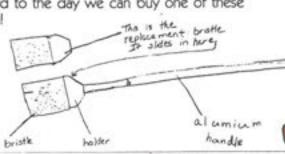

JACLYN BAILEY is a 3rd grader at Belle Plain school in Minnesota who's thinking about Planet 3's trees. She knows

that the homes of many other Earthlings are being destroyed as the ancient forests are chopped down. Jaclyn wrote BROOKS RADCLIFF and his partner, SOKWAT SAM, want to fight pollution letters to President Bush and her state representatives telling them the dangers if they don't help to stop the chop. Jaclyn took a vote and all 25 students wanted to leave the trees alone forever.

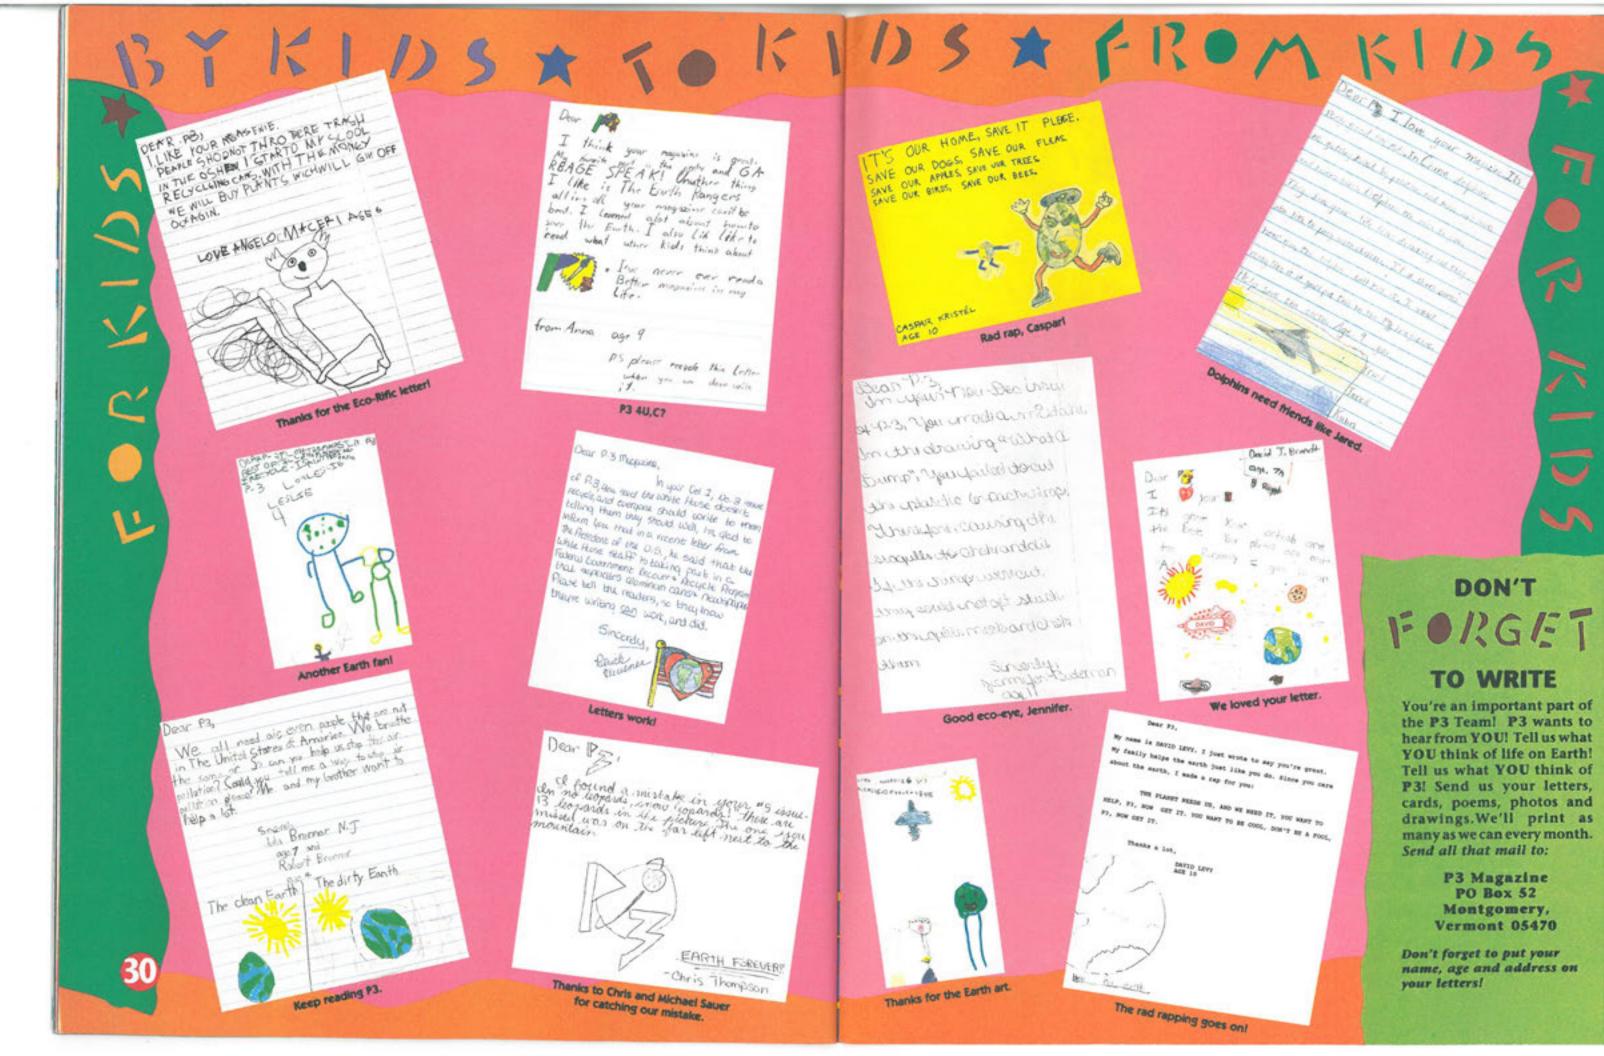

and cavities at the same time. The two 9-year-old ecokids invented a recyclable toothbrush. It has an aluminum handle and recyclable plastic bristles that slide on and off so they can be replaced when they wear out. The toothbrush is still in the planning stages but we're looking forward to the day we can buy one of these Eco-Rific items!

# Eco-KIDS

Hi my name is Jahnavi Goldstein, I am 12 years about P3 (the planet). P3(the magazine) asked me to read the book, "THE KIDS' GREEN PLAN" by Janet E. Grant and then write a review of it. I really enjoyed reading the book. On every page there were interesting facts and fun ideas that we can all do to help P3 (the planet). I learned that a solar powered phone was invented in 1985. I talk on the phone alot and so do most of my friends, so think of how much energy and fossil fuel the world could save if all phones were solar powered! I really liked that the book covered everything about P3; garbage, water and air pollution, acid rain, the forests, and wildlife. Janet Grant talked about the different ways that Canada uses water. Forty five percent of all Canada's water is used on toilets, 28% is used for showers and baths. If more people were aware of these statistics, especially people who live where droughts are common, then we could take showers instead of baths, make sure that water is not left running, and take shorter showers. The book doesn't just inform us about problems on P3, it tells us how to make our own green plan so that we can help P3. The book also gives addresses of places and companies we can write to and tell them how we feel about P3 and what we plan on doing to stop P3 from becoming more polluted. KIDS' GREEN PLAN" is about Canada and parts of the book talk only about Canada's water or Canada's wildlife. Although the emphasis is on Canada, everyone on P3 shares similar problems and so I really liked the book and recommend others to read it too.
